WHAT'S NEW AT BDK

Any web app. New dedicated Preview app. 2x powerful. 70% cheaper.

NEW APP

1. **Any web app can now be your app.**
Lovable, Base44, Replit, ChatGPT sites, Claude Code, Vercel, NextJs or anything else. If it opens in a browser, BDK makes it an iPhone and Android app.

2. **New: a dedicated BDK Preview app.**
A second free app, separate from the BDK Native app you know. It opens your app on your phone, today.

3. **2x powerful. 70% cheaper.**
$99 for iOS + Android, or $49 for iOS only or Android only. One-time, no monthly subscription. Every purchase includes 4 rebuilds, free. Introductory offer, valid until Thanksgiving.

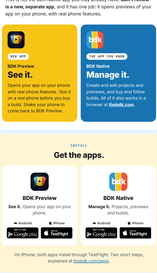

4. **Extra rebuilds: 50% cheaper.**
$19 per project, covering both iOS and Android on combined projects. Upgrade to your web app never need a rebuild.

Preview on my phone

Free. See your app before you buy a build.
Built an app with us before? Rebuild it on the new BDK →
Open my projects

NEW APP

BDK Preview
See it.
Opens your app on your phone with real phone features. Test it on a real phone before you buy a build. Shake your phone to come back to BDK Preview.

ONE APP. TWO STACK

BDK Native
Manage it.
Create and edit projects and previews, and buy and follow builds. All of it also works in a browser at thebdk.com

INSTALL

Get the apps.

BDK Preview
See it. Opens your app on your phone.
Android iPhone
Google Play App Store

BDK Native
Manage it. Projects, previews and builds.
Android iPhone
Google Play App Store

On iPhone, both apps install through TestFlight. Two short steps, explained at thebdk.com/ios

YOUR PREVIEWS

Your previews, your way.

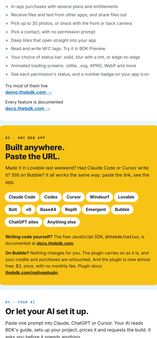

- Previews launch straight into your URL with your own loading screen. **No BDK screens in between**, so you can show it to your clients and customers.
- Keep **up to 20 previews per account** at any time. They stand on their own, apart from your projects.
- Give each one its own name, URL, status-bar colour and loading screen.
- Open a preview with a short code from your dashboard. Scan it or type it, and you're signed in.
- Change a preview's settings with **no rebuild**. It applies the next time it opens.
- Feature demos are built in to BDK Preview, so you can try native features first-hand.

02 · FEATURES

71 native features. One line of code each.

Start with the three that people feel first. Turn on the ones you need in Build Settings, then rebuild.

- **Modal sheets**
Pull up to half or full height, like Maps and Messages.
- **Native transitions**
Screens push in and pull back with a swipe.
- **Health data**
Read steps and more, with the user's permission, in your own build.

Real native sheets and screen transitions, not pages reloaded inside the same web view.

Also new

- In-app purchases with several plans and entitlements
- Receive files and text from other apps, and share files out
- Pick up to 30 photos, or shoot with the front or back camera
- Pick a contact, with no permission prompt
- Deep links that open straight into your app
- Read and write NFC tags. Try it in BDK Preview.
- Live control of status bar: solid, blur with a tint, or edge-to-edge
- Animated loading screens: Jottle, .org, ARPG, WebP and more
- See each permission's status, and a number badge on your app icon

Try most of them live

02 · NEW WEB APP

Built anywhere. Pasted into URL.

Made it in Lovable last weekend? Had Claude Code or Cursor write it? Still on Bubble? It all works the same way: paste the link, see the app.

Claude Code · Codex · Cursor · Windsurf · Lovable · Bolt · v0 · Base44 · Replit · Emergent · Bubble · ChatGPT sites · Anything else

Writing code yourself? The free JavaScript SDK, @thebdk/native, is documented at docs.thebdk.com

On Bubble? Nothing changes for you. The plugin carries on as it is, and your credits and purchases are untouched. And the plugin is now almost free. $1, once, with no monthly fee. Plugin docs:
thebdk.com/nativeplugin.

03 · STEP 3

Or let your AI set it up.

Paste one prompt into Claude, ChatGPT or Cursor. Your AI reads BDK's guide, sets up your project, prices it and requests the build. It asks you before it spends anything.

Paste this into your AI:

```
Help me turn my web app into iPhone and Android apps with BDK Native. Fetch https://thebdk.com/agent/web2ios.md and follow it.
```

More at thebdk.com/agent → including the MCP server.

05 · YOURS

Everything stays yours.

- Your store listing, your keys, your users, your reviews and your revenue. BDK never touches your code, and there is no kill switch.
- **If BDK vanished tomorrow, your app keeps running.**
- Changes to your web app never need a rebuild. And when native starts paying off, your team can take the app fully native as an upgrade to the same build.

ABOUT

Since 2018.

Thousands of apps shipped to the stores

Millions of devices

100+ countries

Never rejected for lack of a native capability

The BDK gallery lists real apps in Apple and Google stores, built from web apps their founders already had.

A NOTE FROM GAURAV

I started BDK in 2018 to turn Bubble apps into real iPhone and Android apps. This month it becomes what I always wanted it to be: one place that turns any web app, not just Bubble apps, into an iOS and Android app you own. Best Apple and Google stories, new features, and a price no one else offers.

AI made this possible. Recent advances let us automate most of what used to take a developer a week or more. But AI alone is not what's saving on its you. The same advances let us ship new native capabilities at breakneck speed.

They also mean you are never locked in. The tools people build web apps with are changing fast, and BDK is the only platform that supports all of them. Wherever you build next, your app comes with you.

The best way to trust something is to experience it. We have built the BDK Preview app for nearly every feature, ready for you to use and test. And in preview mode you can build those features into your own app and try them on your phone, before you pay anything.

Need a hand? Drop a message on our chat support. We're here.

Gaurav
Founder, BDK
